April 17, 2002

Minerals Management Service
Offshore Minerals Management

Gary Lore, Chief
e-Gov Program Management Office

MMS – A Resource Manager ...

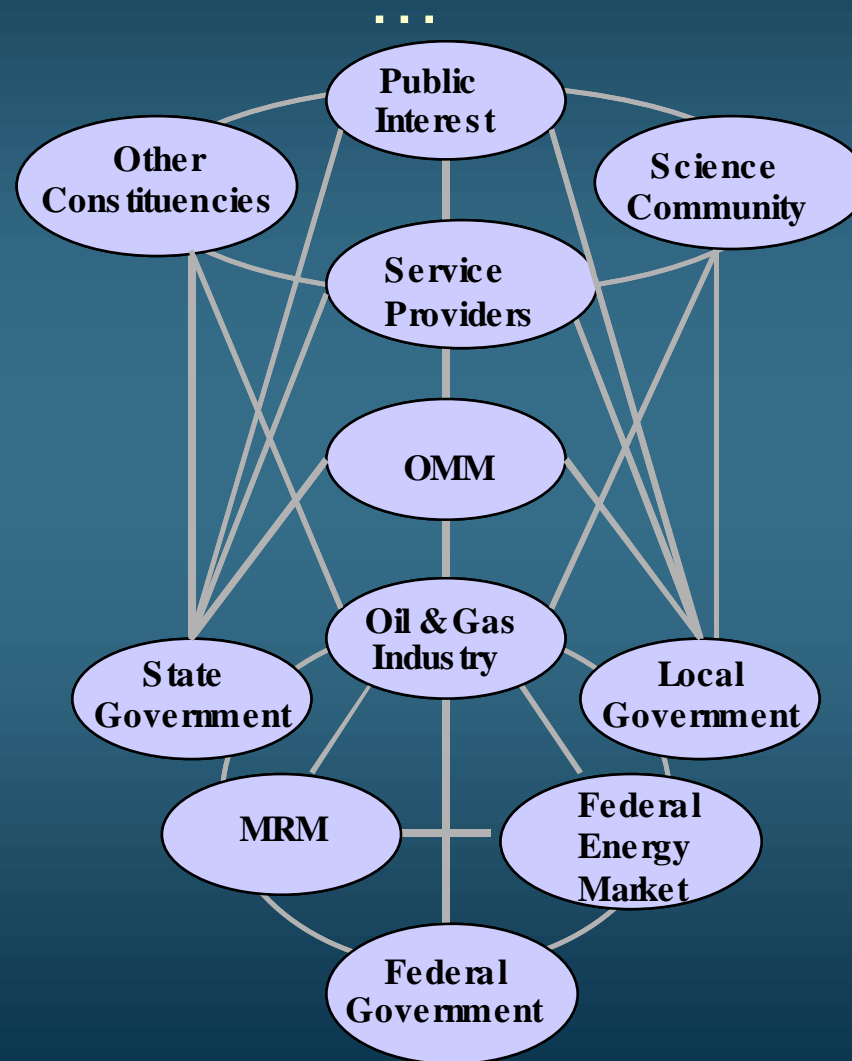

- Responsibility
 - 1.7 billion OCS acres
 - 25% of U.S. oil; 26% of U.S. natural gas
- Management
 - Lease issuance to decommissioning
 - Safety & environmental performance is key
- Revenue
 - Since 1953 - \$133 billion from OCS
 - Generates \$5 to \$10 billion revenues annually

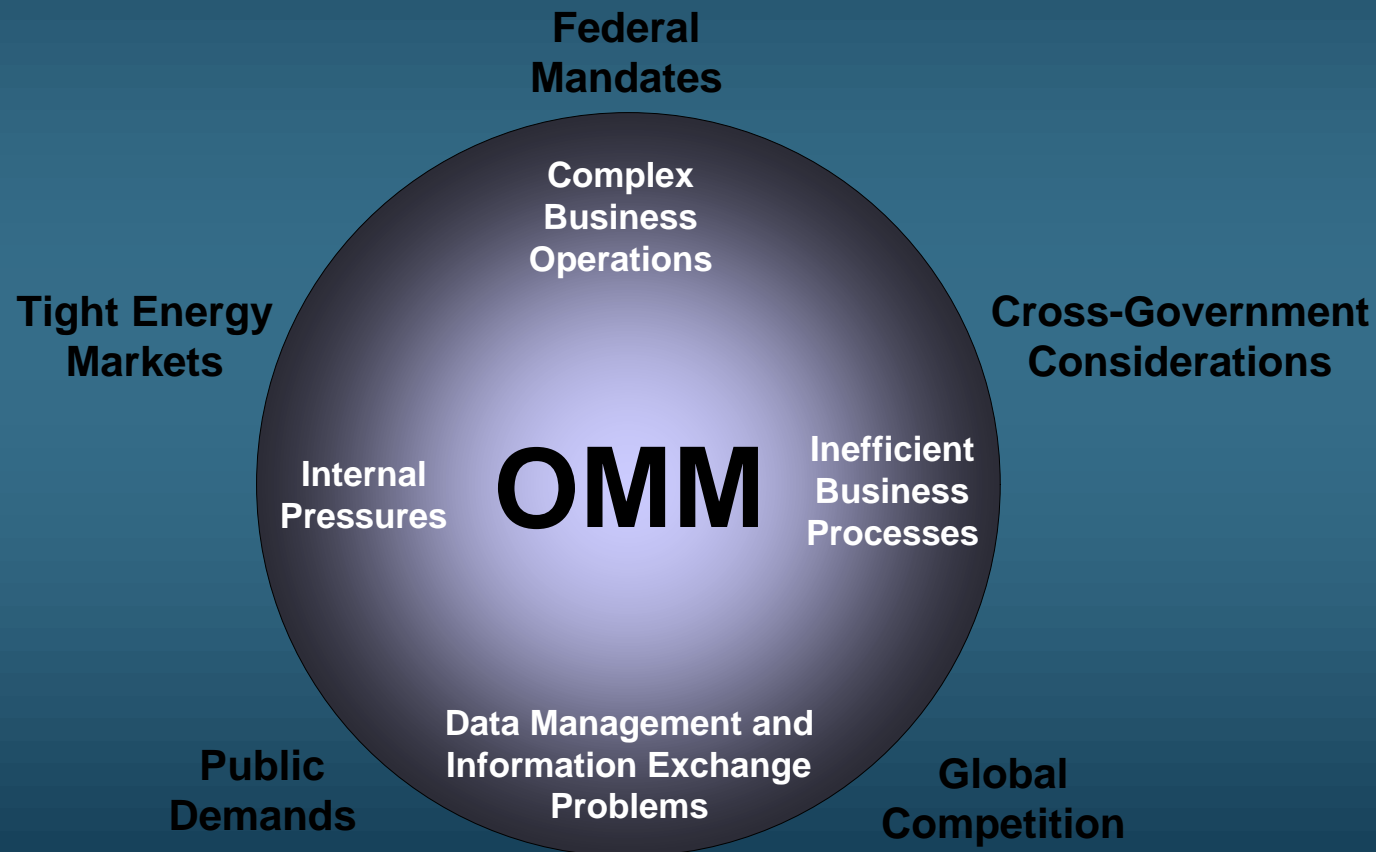

MMS – “Cradle to Grave” Service Provider ...

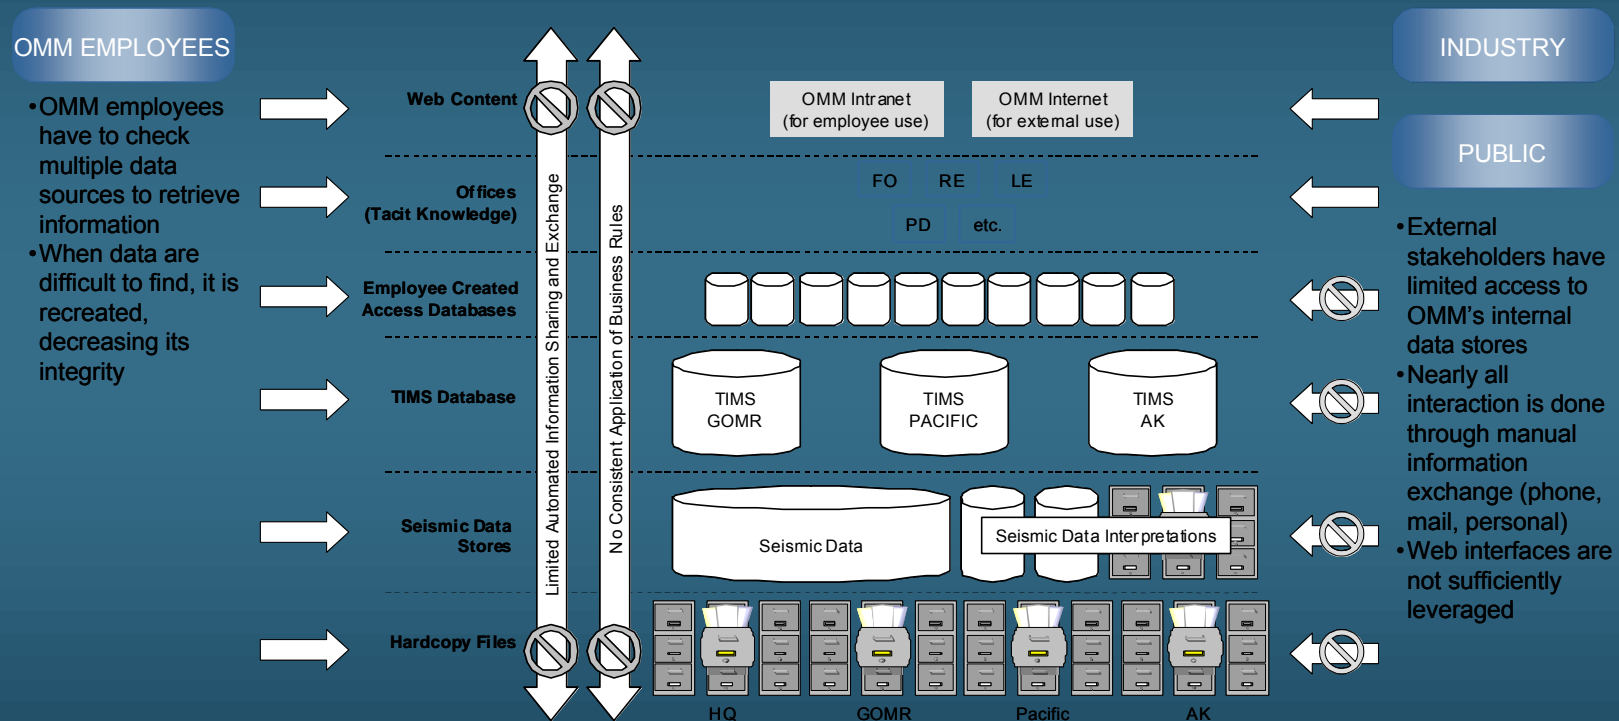

MMS – at the Hub of an Extensive Process

MMS Faces Many Pressures For Change ...

Current Fragmented Architecture Doesn't Support Customer Needs ...

OCS Connect – Transforming OMM through e-Government

- Multi-phased transformation to dramatically reform and streamline business operations by 2007
- Online service delivery increases ‘connectedness’ with customers: industry, citizens and government agencies
- Consistent with Administration’s Management Reform Agenda

Digital Service Delivery – Meeting Future Mission Needs

Maximize citizen involvement by delivering essential information and allowing input via the Internet

Streamline mission delivery by automating major business transactions and providing 'digital' data management, such as plan review, resulting in more timely decisions

Simplify and unify government by minimizing redundant reporting, and streamlining government interactions with industry and the public

Leverage market-based practices by using common oil and gas standards and solutions (e.g. data model, exchange standards)

OCS Connect – Better Serving Customers through e-Government ...

Industry ... enters a single portal to conduct online transactions (e.g. plan review and approval), resulting in time and cost savings

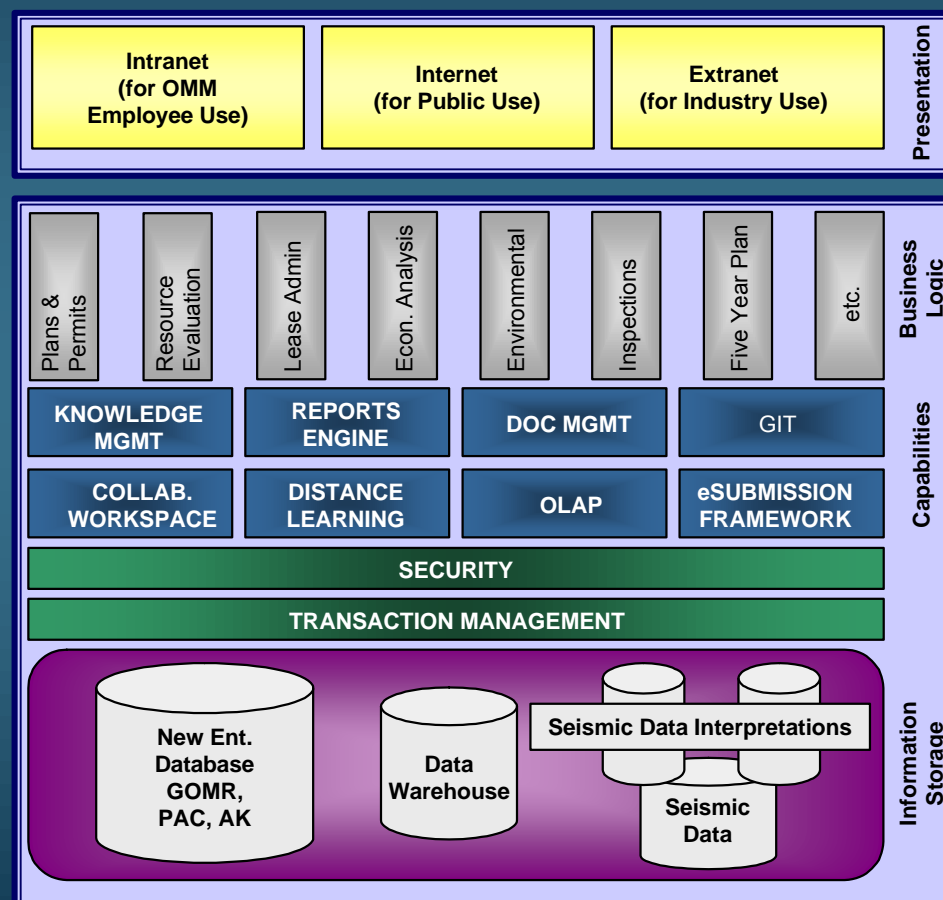

Citizens ... enter a single portal that delivers customized user-friendly information

Gov't Agencies ... share common data exchange standards and future applications

MMS ... spends less time processing paper applications and data and more time responding to customer's expanding requests and analysis

A More Integrated Architecture ...

- No “bleeding edge” technologies; leverage COTS and industry best practices
- Layered reference models
- Significant emphasis on privacy, security, and accessibility

Setting the Path Forward ...

Near-term

- Re-engineering OMM Business Processes
- Pilot Project

Ongoing

e-Gov Enhancements

- online rulemaking
- online applications and reports
- online document tracking
- access to studies/data

*** SECURITY ***

Full Term

Complete Business Functionality by 2007

Pilot Well Permitting for Early Win ...

- Streamline the regulated information collection process and operations for well drilling, completion, and workover operations on the OCS

Well Permit and Report System

- MMS-123, Application for Permit to Drill
- MMS-123S, Supplemental APD Information
- MMS-124, Well Sundry Notice and Report
- MMS-125, Well Summary Report
- MMS-133, Weekly Activity Report
- MMS-144, Rig Move Notification

(Pending Department/OMB approval)

Well Permit & Report System – Round One Deliverables ...

- Round One Beta Test Deliverables: (September 2002)
 - Permit to Drill a New Well
 - Permit to Drill a Sidetrack or By-Pass
 - Review or Modify a Submitted or Approved Application
 - Maintain casing Specifications
 - System Modules
(entitlements, login, security, and Oracle reports)
- Working with OOC e-Gov Team to identify a small group of industry beta testers

Well Permit & Report System – Round Two

Deliverables ...

- Round two deliverables:
 - Permit to Modify an Existing Well
 - Rig Movement Notification Report
 - Weekly Activity Report
 - Open Hole Well Data Inventory
 - End of Operations Report

MMS Needs Your Input ...

- Help ensure our processes are compatible with industry and other regulators ...
 - Development of Standards
 - Pilot Projects
- OMM will continue to connect with stakeholders throughout the life of the project ...
 - Oil and Gas Industry
 - Industry Associations
 - Data Standards Groups
